

Material Drawing: Deluxe Touring Bike (BLACK)

A touring bicycle is a bicycle designed or modified to handle bicycle touring. To make the bikes sufficiently robust, comfortable and capable of carrying heavy loads, special features may include a long wheelbase (for ride comfort and to avoid pedal-to-luggage conflicts), frame materials that favor flexibility over rigidity (for ride comfort), heavy duty wheels (for load capacity), and multiple mounting points (for luggage racks, fenders, and bottle cages).

Sport touring

The sport/touring bicycle is a very lightweight touring bike fitted with lighter wheels and narrower 25–28 mm (1 - 1.125-inch) tires. It may also be described as a road racing bike fitted with heavier tires and slightly more relaxed frame geometry (though still quicker than the

average road touring bike). It is designed as a fast-handling, responsive and quick day touring machine. As such, it is intended to carry only the rider and very light loads, such as encountered in credit card touring, where riders typically carry little more than a pocketbook and credit cards to book overnight lodging at any handy motel, pension, or bed-and-breakfast while on a journey. Gearing is often a mix of closely spaced ratios for speed, combined with a few low gears for long climbs. Sport/touring bikes may sometimes have provisions for mounting slim fenders and a rear carrier or pannier rack, though in the interests of weight savings and quicker handling, most do not
